YOU ARE ABOUT TO ENTER A DRY TOILET.
YES, DRY.

HOW TO USE IT?

1.

Sit on commode.
Do your job.
Don't worry, your matter will **land** safely.

2.

Move to the bidet.
As easy as 1, 2, 3.
Promise!
Perform your ablutions.

3.

See the bin next to you?
Collect 1/4 mug of sawdust from the bin and **sprinkle** it over your waste matter.
Like that last pinch of salt.

AND THAT'S IT!

Why DRY TOILET?

EVERY PROCESS IN NATURE IS CYCLICAL.
SO IS USING THE DRY TOILET.

FOOD → DIGESTION → FECAL MATTER → COMPOST → FOOD

sustainable

NO FLUSH	APPROX. 300-600mL H_2O REQUIRED PER USE [ONLY FOR WASHING]	COMPOST CAN BE HARVESTED & EVEN BE SOLD.

THE WET TOILET SYSTEM IS LINEAR.
FOOD → FECAL MATTER → SEWAGE → DUMPED.

6-20L H_2O LOST AND POLLUTED PER FLUSH.	PIPES, MOTOR & SEPTIC TANK REQUIRE MAINTENANCE.

Congratulations! You have just saved 6-20L fresh water! ☺

Save water

SO WHY NOT DRY TOILET?

KFI TEACHERS' CONFERENCE, DEC 2018.
