

# Natural Farming: a paradigm shift

Author - Sudhirendar Sharma, Published on - 19.7.2018

After being under siege of the irrigation and chemical-intensive Green Revolution for over six decades, agriculture is now in the throes of a revolutionary change. Over 1,63,000 farmers on some 1,50,000 acres of farmland spread across six agro-climatic zones in Andhra Pradesh have successfully demonstrated that farming without chemicals is a profitable possibility, and that higher yields could be achieved by reducing external inputs and water.
